PORTFOLIO_

< BOOTSTRAP - HOSTING A WEBSITE WITH GITHUB PAGES />

PORTFOLIO

This tutorial walks you through **publishing a static website** (HTML/CSS/JS) using **GitHub Pages**, a free hosting service provided by GitHub.

Prerequisites

Before you begin, make sure you have:

- ✓ a GitHub account;
- ✓ a basic website project with `index.html` and optional CSS/JS files.

Create a GitHub Repository

- ✓ Go to github.com and log in.
- ✓ Click the **"New repository"** button.
- ✓ Give your repository a name (e.g. `my-portfolio`).
- ✓ Select **Public** repository (required for GitHub Pages to work).
- ✓ Click **Create repository**.

Upload Your Website Files

Option A: Using git command line

If your project is already on your computer:

```
cd path/to/your/project
git init
git remote add origin https://github.com/YOUR_USERNAME/YOUR_REPO_NAME.git
git add .
git commit -m "A clear commit message"
git push -u origin main
```

Don't forget to replace YOUR_USERNAME and YOUR_REPO_NAME!

Option B: Using GitHub Web Interface

✓ On GitHub, go to your repository page, then click "**Add file**" > "**Upload file**".

✓ Drag and drop your files (e.g., index.html, style.css, etc.).

✓ Enter a clear commit message, then click "**Commit changes**".

Enable GitHub Pages

✓ Open your repository on GitHub.

✓ Click the "**Settings**" tab.

✓ In the left sidebar, go to "**Pages**".

✓ Under "**Build and deployment**", choose:

- Source: Deploy from a branch
- Branch: main
- Folder: / (root) (or /docs if your site files are in a folder named docs)

✓ Click **Save**.

If you don't see "**Pages**" in the menu, scroll down or try refreshing the pages.

Visit Your Website

After a few seconds to a few minutes, your site will be live.

Check it at the URL that looks like this: `https://YOUR_USERNAME.github.io/YOUR_REPO_NAME/`.

You can also find this URL displayed in the GitHub Pages settings section.

v 0.1.1
